ANIMAL RESOURCES PROGRAM/DOWNTOWN CAMPUS

MEDICAL CENTER BOULEVARD

Type: ROUTINE INSPECTION

WINSTON SALEM, NC 27157

Date: Jul-10-2012

### 3.75 (a)

#### HOUSING FACILITIES, GENERAL.

Structure: construction. Housing facilities for nonhuman primates must be designed and constructed so that they are structurally sound for the species of nonhuman primates housed in them. They must be kept in good repair, and they must protect the animals from injury, contain the animals securely, and restrict other animals from entering.

\*\*\*One female cynomolgus macaque escaped the facility during enclosure cleaning on June 28th. According to staff, the macaque became excited and leaped onto the enclosure door, which was not securely latched due to a hose coming thru for cleaning. The door swung open into an outside corridor and the macaque managed to open a simple latch on the door to the outside. The animal then escaped into nearby trees and has not been recaptured, despite repeated attempts at darting, baiting, and trapping. The animal has been seen numerous times within a few miles of the facility since its escape and the facility continues to attempt recapture. The ultimate cause of the escape appears to be the simple latch from the outside corridor to the outdoors. This latch was not secure enough to prevent a macaque escape since it was easily manipulated to open. Since the escape, an additional chain with a secure latch has been added to all outside corridors that had the simple latch. This should prevent any further escapes. Corrected prior to inspection.

Exit briefing conducted with facility representative.

This was an inspection of the Friedburg campus only.
